## F02 ELECTRIC ACTUATORS

### DESIGN FEATURES

---

#### Mechanical connection to the valve

F02 actuators feature a multi drilled base plate and a range of drive inserts to allow direct mounting to almost all valve types according the EN ISO 5211 and other manufacturers' standards.

#### Power supply

F02 can simply be connected to the local power supply. It accepts any single phase input voltages (from 24 to 48 V DC or AC and 100 to 240 V DC or AC). Alternatively 3 phase voltages from 208-240 V AC, 380-480 V AC and 500-575 V AC are also available

#### Electric motor thermostat

A thermostat to protect the motor temperature in hot applications is included as standard in the control circuit of the electric actuator.

#### Heater

A heater is standard available within the unit and is powered from the motor power supply. It is automatically activated when the temperature drops below 10°C in order to prevent condensation.

#### Actuator service

The standard actuator is suitable for open/close and modulating applications.

#### Compact and light design

F02 actuators are very compact and balanced for easy installation to small valves minimizing pipe work stress or loads to the valve shaft.

#### Actuator configuration

Each actuator is equipped with 2 rotary switches on the logic board to configure each function and parameter like position, torque, open/close speed and output contacts. Additionally each optional module has its own additional switches for its specific configuration.

#### Local manual override

A constantly engaged manual override (not rotating during motor operation) is fitted to all F02 actuators.

#### Torque and sizing

The F02 range comprises of six models, for operating torques of up to 2000 Nm / 17,700 lb.in. with a configurable operation time from 15 to 180 seconds. The nominal output torque value is constant along the entire stroke.

#### Non-intrusive configuration

With Bluetooth® wireless technology enabled on your PDA or PC all configuration requirements can be undertaken without opening the unit. Direct access to the F02 is then available for configuration and predictive/preventative maintenance information, including valve position, actuator speed, output torque, alarm and status.

#### Position monitoring

The F02 provides a local mechanical position indication. For remote indication the position is detected by a non-contact sensor. The open and close position are configured via the electronic control card.

#### Electronic controls

Internal drive to reverse the actuator rotation direction via remote control signals with internal 24 V DC or external 24 V DC/AC up to 120 V DC/AC power supply.

#### Output contacts

4 latched-type output contacts for fully open/fully close remote indication; 1 output contact for monitor (loss of power, torque alarm, high temperature alarm, travel alarm, position sensor, hardware malfunction, local interface malfunction, local selector in LOCAL); 1 output contact for blinker/local selector indication [local selector feature only with OM3 installed].
