

Differential pressure gauge

For the process industry, all-metal media chamber

Models 732.14, 733.14, 762.14 and 763.14

WIKA data sheet PM 07.13

for further approvals,
see page 7

Applications

- For gaseous and liquid aggressive media that are not highly viscous or crystallising, also in aggressive environments
- Pump monitoring and control
- Filter monitoring
- Level measurement on closed vessels

Special features

- Differential pressure measuring ranges from -1 ... +30 bar [-14.5 ... 435 psi] to 0 ... 40 bar [0 ... 580 psi]
- High working pressure (static pressure) and high overload safety, selectable 40 bar [580 psi], 100 bar [1,450 psi], 250 bar [3,625 psi], 400 bar [5,800 psi] and 650 bar [9,425 psi]
- The transmission fluid in the measuring chamber dampens the indicator in case of high changes of the rate of pressure
- Model 73x.14: Stainless steel version
Model 76x.14: Version with special materials

Differential pressure gauge model 732.14

Description

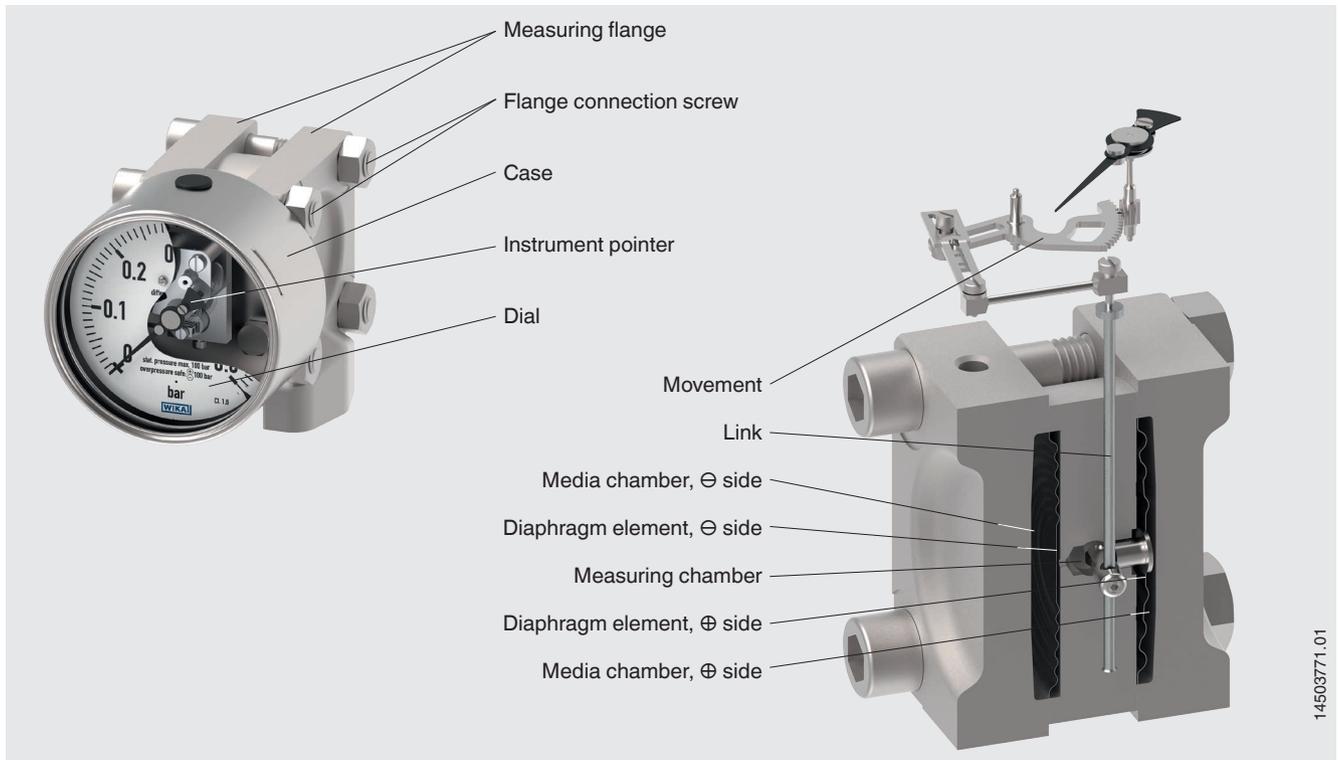

These differential pressure gauges are made of highly corrosion-resistant stainless steel. A high overload safety is achieved by the all-metal construction and the close-fitting design of the diaphragm measuring element.

The use of high-quality stainless steel materials and the robust design are geared to applications in the chemical and process engineering industries. Thus the instrument is suitable for liquid and gaseous media, also in aggressive environments.

The wetted parts for these instruments are also available in special materials such as Monel or Hastelloy.

Scale ranges of 0 ... 60 mbar to 0 ... 40 bar [0 ... 0.87 to 0 ... 580 psi] ensure the measuring ranges required for a wide variety of applications.

Functionality

Design and operating principle

- Pressures p_1 and p_2 act on the \oplus and \ominus sides of the measuring chamber.
- The media chambers are separated from the transmission fluid-filled measuring chamber by one diaphragm element each.
- The pressure difference between \oplus and \ominus sides deflects the diaphragm of the \oplus side and displaces the transmission fluid.
- The deflection is transmitted to the movement via the link.
- The movement converts the deflection into a pointer rotation.

Overload safety

Through load take-up points with metallic seating for the diaphragm elements, the instrument can withstand extremely high working pressures with pressure ratings of PN 40 ... PN 650 (40 ... 650 bar [580 ... 9,425 psi]).

Overview of versions

Model	Material of wetted parts		With case filling
	Stainless steel 1.4571 (316 Ti)	Monel 2.4360 / Monel 2.4360 + Hastelloy C276	
732.14	x		
733.14	x		x
762.14		x	
763.14		x	x

The above-mentioned versions can, optionally, be ordered with Ex approval.

→ For approvals and certificates, see page 7

Specifications
