

# MR95 Series Industrial Pressure Regulators

## PRESSURE REDUCING REGULATORS

*Figure 1. Typical MR95 Series Industrial Pressure Regulators*

# MR95 Series

## Specifications

This section lists the specifications for the MR95 Series regulators. Factory specification such as type, maximum inlet pressure, maximum temperature, maximum outlet pressure, spring range, orifice size and seat material are stamped on the nameplate fastened on the regulator at the factory.

### Available Constructions

**Type MR95L:** Pressure reducing regulator for outlet pressures from 2 to 30 psig / 0.14 to 2.1 bar. 1/4 to 1 in. body sizes only.

**Type MR95H:** Pressure reducing regulator for outlet pressures from 5 to 150 psig / 0.34 to 10.3 bar.

**Type MR95HP:** Pressure reducing regulator for outlet pressures from 15 to 400 psig / 1.0 to 27.6 bar (soft-seated).

**Type MR95HT:** High temperature pressure reducing regulator for outlet pressures from 15 to 300 psig / 1.0 to 20.7 bar (metal seat) and up to 650°F / 343°C.

**Type MR95LD:** Pressure reducing differential regulator for differential set pressures from 2 to 30 psi / 0.14 to 2.1 bar with maximum inlet pressure up to 300 psi / 20.7 bar and maximum outlet pressure up to 125 psi / 8.6 bar. 1/4 to 1 in. body sizes only.

**Type MR95HD:** Pressure reducing differential regulator for differential set pressures from 5 to 150 psi / 0.34 to 10.3 bar with maximum inlet/outlet pressures up to 300 psig / 20.7 bar.

**Type MR95HDP:** Pressure reducing differential regulator for differential set pressures from 5 to 150 psi / 0.34 to 10.3 bar with maximum inlet/outlet pressures up to 600 psi / 41.4 bar.

### Body and Orifice Sizes

#### 1/4 NPT body:

0.284 in. / 7.22 mm orifice

#### 1/2 in. / DN 15 body:

0.416 in. / 10.56 mm orifice

#### 3/4 and 1 in. / DN 20 and 25 bodies:

0.631 in. / 16.02 mm orifice

#### 1-1/2 and 2 in. / DN 40 and 50 bodies

(not available for Types MR95L and MR95LD):

1.142 in. / 29 mm orifice

### End Connection Styles

See Tables 1 and 2

### Outlet or Differential Pressure Ranges<sup>(1)</sup>

See Table 3

### Maximum Cold Working Pressures of Body Size and Material<sup>(1)</sup>

See Table 4

### Maximum Temperature Ranges of Diaphragm and Seat Materials<sup>(1)(2)(3)</sup>

See Table 5

### Maximum Temperature Ranges of Body Materials<sup>(1)(2)(3)</sup>

See Table 5

### Spring Case Construction

#### Drilled Untapped Hole:

Standard for Types MR95L, MR95H, MR95HP and MR95HT

#### 1/4 NPT Vent:

Standard for Types MR95LD, MR95HD and MR95HDP

Optional for Types MR95L, MR95H, MR95HP and MR95HT

### Pressure Setting Adjustment

#### Adjusting screw:

Standard for Types MR95L, MR95H, MR95HP and MR95HT only

#### Handwheel:

Standard for Types MR95LD, MR95HD and MR95HDP

Optional for 1/2 in. / DN 15 body size of Types MR95L, MR95H, MR95HP and MR95HT

#### Tee handle:

Optional for other body sizes (except 1/2 in. / DN 15) of Types MR95L, MR95H, MR95HP and MR95HT

### Pressure Registration

Internal or External

### Shutoff Classification Per ANSI/FCI 70-3-2004

**Metal Seats:** Class IV

**Elastomer Seats:** Class VI or better

**PTFE:** Class IV

### Flow and Sizing Coefficients

See Table 6

### Relief Sizing Coefficients for MR95 Series Regulators with Reduced Flow Orifices

See Table 7

1. The pressure/temperature limits in this Bulletin and any applicable standard or code limitation for this regulator should not be exceeded.

2. Pressures and/or the body end connection may decrease these maximum temperatures.

3. Special Cryogenic constructions for process temperatures as low as -320°F / -196°C are available by request. The cryogenic temperature constructions passed laboratory testing for external leakage down to -320°F / -196°C.

- continued -

## Specifications (continued)

### Trim Materials

See Table 8

### Main Valve Construction Materials

See Table 9

### Product Dimension

See Figure 3

### Typical Regulating Capacities

**Air:** See Tables 11, 12, 13, 14 and 15

**Steam:** See Tables 16, 17, 18, 19 and 20

**Water:** See Tables 21, 22, 23, 24 and 25

### Regulating $C_v$ Values

See Tables 26, 27, 28, 29 and 30

### Approximate Weights

#### MR95H Series

*1/4 NPT body:* 5 lbs / 2.3 kg

*1/2 in. / DN 15 body:* 10 lbs / 4.5 kg

*3/4 and 1 in. / DN 20 and 25 bodies:*

22 lbs / 10 kg

*1-1/2 and 2 in. / DN 40 and 50 bodies:*

55 lbs / 25 kg

#### MR95L Series

*1/4 NPT body:* 7 lbs / 3.2 kg

*1/2 in. / DN 15 body:* 15 lbs / 6.8 kg

*3/4 and 1 in. / DN 20 and 25 bodies:*

35 lbs / 16 kg

## Introduction

The MR95 Series regulators are compact, large-capacity, direct-operated pressure regulators (see Figure 1). The units are available in 1/4 NPT through 2 in. / DN 50 sizes and are offered in several different end connection configurations. They are designed to handle pressures up to 1000 psig / 68.9 bar and temperatures up to 650°F / 343°C.

These products can help solve the toughest pressure control applications. Typical applications include superheated steam, steam injection, steam tracing, nitrogen purging, boiler feed water, process chemicals, cooling water, test fixtures, wash tanks, sterilizers/autoclaves, fuel lines, pneumatic supply and many others.

## Features

- **Handwheels/Tee Handles**—Allow easy pressure setting changes and are standard on Types MR95LD, MR95HD and MR95HDP and optional on the Types MR95L, MR95H, MR95HP and MR95HT regulators.
- **Versatile**—Can be used with all process media including air, steam, gas, water, liquids (oils and process chemicals) and oxygen.
- **Tight Shutoff With Elastomer Seats**—Metal seats available for high temperatures.
- **Direct-Operated**—Design maximizes speed of response.
- **Robust**—Up to 1000 psig / 68.9 bar inlet pressure.
- **$P_1 = P_2$** —Inlet equals outlet rating in Types MR95H, MR95HD and MR95HDP up to 300 psig / 20.7 bar.
- **Rugged Construction**—Proven design, built to last longer for the toughest service conditions. Severe service elastomers and corrosion resistant

trims are also available and provide excellent fluid compatibility.

- **Differential Pressure Capability**—Spring-loaded Polytetrafluoroethylene (PTFE) packing and tapped connections permit pressure loading of the Types MR95LD, MR95HD and MR95HDP spring cases.
- **Arctic Temperature Constructions**—for process temperatures as low as -76°F / -60°C.
- **Special Service Capabilities**—Optional materials are available for applications handling sour gases, cryogenics and superheated steam.
- **Large Turndown Ratio**—No need for low  $C_v$  trims at low flows.
- **Graphite Gaskets**—For high temperature applications up to 650°F / 343°C (optional).
- **Multiple End Connection Options**—To match your application.
- **Easy Maintenance**—Seating parts are easily accessible by removing the plug on the bottom of the regulator.
- **API 614 Compliant**—Steel or Stainless steel constructions with Stainless steel trim meet API 614 requirements.
- **FDA, USP Class VI and ADI Free EPDM Elastomers**—for use in applications requiring clean regulator solutions (wetted components only)
- **Hydrogen Ready**—Products have been evaluated for material compatibility, potential leakage and permeation and susceptibility to embitterment for Hydrogen applications. Based on an extensive evaluation and testing program, MR95 Series configurations are available for use in Hydrogen applications.

1. For Types MR95LD, MR95HD and MR95HDP regulators, the pressure ranges indicate the differential pressure that can be obtained with the indicated spring. The differential pressure (spring setting) is added to the spring case loading pressure to determine the actual outlet pressure.  
 2. Springs meet NACE MR0175-2002, NACE MR0103 and NACE MR0175/ISO 15156 requirements only for applications in which the spring is not exposed to the sour gas.  
 3. Available in Inconel<sup>®</sup>.

1. The pressure/temperature limits in this Bulletin and any applicable standard or code limitation should not be exceeded.
2. The pressure limits given are based on the body size and body materials only. Actual pressure limits of the assembled regulator may decrease and vary depending on the temperature, body end connection, diaphragm, seat and/or trim material of the regulator.
3. See Tables 1 and 2 for all available body sizes.
4. Not available for 1/4 NPT body size.

Stainless Steel (300 Series)	✓	✓				✓	✓	-40 to 450 for Inner Valve Spring -320 to 650 for other trim parts	-40 to 232 for Inner Valve Spring -196 to 343 for other trim parts
Inconel <sup>®</sup>						✓	✓	-320 to 650	-196 to 343
Metal	✓	✓						-40 to 650	-40 to 343
Composition <sup>(6)</sup>					✓			-40 to 406	-40 to 208
Graphite					✓			-320 to 650	-196 to 343
<b>BODY MATERIAL</b>								<b>TEMPERATURE</b>	
								°F	°C
Gray cast iron								-20 to 406	-29 to 208
WCC Steel <sup>(4)</sup>								-20 to 650	-29 to 343
LCC Steel <sup>(4)</sup>								-40 to 650	-40 to 343
Stainless steel <sup>(4)</sup> , Monel <sup>®</sup> or Hastelloy <sup>®</sup> C								-320 to 550	-196 to 288
Aluminum-Bronze								-40 to 500	-40 to 260
<p>1. The pressure/temperature limits in this Instruction Manual and any applicable standard limitation should not be exceeded.</p> <p>2. The temperature limits given are based on the body size and body materials only. Actual temperature limits of the assembled regulator may decrease and vary depending on the body end connection, diaphragm, seat and/or trim material of the regulator.</p> <p>3. Not for use on steam service.</p> <p>4. Meets API 614 requirements (with Stainless steel trim).</p> <p>5. Special Cryogenic constructions for process temperatures as low as -320°F / -196°C are available by request. The cryogenic temperature constructions passed laboratory testing for external leakage down to -320°F / -196°C.</p> <p>6. Temperature rating can be increased up to 450°F / 232°C but may require increased gasket maintenance.</p> <p>7. Sanitary EPDM elastomers meet FDA, USP Class VI and ADI Free requirements.</p>

1. Capacities are based in lbs/h / kg/h of saturated steam.  
 2. To obtain capacities for regulators with reduce flow orifices, multiply the table values by 0.7.

**Table 16. Steam Capacities<sup>(1)(2)</sup> for 1/4 NPT and 1/2 through 1 in. / DN 15 through 25 Types MR95H, MR95HD and MR95HDP Regulators with Metal Diaphragm**

1. Capacities are based in lbs/h / kg/h of saturated steam.  
 2. To obtain capacities for regulators with reduce flow orifices, multiply the table values by 0.7.

# MR95 Series

**Table 17. Steam Capacities<sup>(1)(2)</sup> for 1-1/2 through 2 in. / DN 40 through 50 Types MR95H, MR95HD and MR95HDP Regulators with Metal Diaphragm**

■ - Denotes capacities limited by boost.

1. Capacities are based in lbs/h / kg/h of saturated steam.

2. To obtain capacities for regulators with reduce flow orifices, multiply the table values by 0.7.

**Table 20. Water Capacities<sup>(1)(2)</sup> in GPM / L/min for 1/4 NPT and 1/2 through 1 in. / DN 15 through 25 Types MR95L and MR95LD Regulators with Elastomer Diaphragm**

■ - Capacities not tested due to cavitation regime.  
 1. To obtain capacities for regulators with metal diaphragms, multiply the table values by 0.8.  
 2. To obtain capacities for regulators with reduced flow orifices, multiply the table values by 0.7.

# MR95 Series

**Table 21. Water Capacities<sup>(1)(2)</sup> in GPM / L/min for 1/4 NPT and 1/2 through 1 in. / DN 15 through 25 Types MR95H, MR95HD and MR95HDP Regulators with Elastomer Diaphragm**

■ - Denotes capacities limited by boost.

1. To obtain capacities for regulators with reduced flow orifices, multiply the table values by 0.7.

# MR95 Series

**Table 23. Water Capacities<sup>(1)(2)</sup> in GPM / L/min for 1/4 NPT and 1/2 through 1 in. / DN 15 through 25 Type MR95HP (Elastomer Diaphragm) Regulator**

■ - Capacities not tested due to cavitation regime.

1. To obtain capacities for regulators with metal diaphragms or for Type MR95HT, multiply the table values by 0.6. Capacity data for 1000 psig / 69.0 bar inlet is not applicable for Type MR95HT (Type MR95HT max. inlet = 600 psig / 41.4 bar).

2. To obtain capacities for regulators with reduced flow orifices, multiply the table values by 0.7.

**Table 24. Water Capacities<sup>(1)(2)</sup> in GPM / L/min for 1-1/2 through 2 in. / DN 40 through 50 Type MR95HP (Elastomer Diaphragm) Regulator**

☐ - Denotes capacities limited by boost.

☐ - Capacities not tested due to cavitation regime.

1. To obtain capacities for Type MR95HT (metal diaphragm), multiply the table values by 0.6. Capacity data for 1000 psig / 69.0 bar inlet is not applicable for Type MR95HT (Type MR95HT max. inlet = 600 psig / 41.4 bar).

2. To obtain capacities for regulators with reduced flow orifices, multiply the table values by 0.7.

■ - Denotes capacities limited by boost.

1. To obtain capacities for regulators with reduced flow orifices, multiply the table values by 0.7.

**Table 28. Water Capacities<sup>(1)(2)</sup> in C<sub>v</sub> for 1/4 NPT and 1/2 through 1 in. / DN 15 through 25 Type MR95HP Regulator with Elastomer Diaphragm**

■ - Capacities not tested due to cavitation regime.

1. To obtain capacities for regulators with metal diaphragms or for Type MR95HT, multiply the table values by 0.6. Capacity data for 1000 psig / 69.0 bar inlet is not applicable for Type MR95HT (Type MR95HT max. inlet = 600 psig / 41.4 bar).

2. To obtain capacities for regulators with reduced flow orifices, multiply the table values by 0.7.

# MR95 Series

Figure 2. MR95 Series Operational Schematics (continued)

## Principle of Operation

The MR95 Series (refer to Figure 2) is a direct-operated regulator. Downstream pressure is registered internally or externally through a control line to the under side of the diaphragm. When the downstream pressure is at or above the set pressure, the disk is held against the orifice, restricting fluid flow through the regulator. When demand increases, downstream pressure drops slightly allowing the spring to extend, moving the stem down and the disk away from the orifice. This allows fluid flow through the body to the downstream system. Types MR95H, MR95L, MR95HP and MR95HT use spring force to regulate outlet pressure. Types MR95HD, MR95HDP and MR95LD use spring force to maintain a differential pressure between spring case loading pressure and outlet pressure.

## Installation

The MR95 Series regulators may be installed in any position, as long as flow will be in the same direction as that indicated by the body arrow. The Types MR95H, MR95L, MR95HT and MR95HP regulators should be installed so that their spring case vents are protected from anything that might clog them. For lube oil applications, the regulators should be installed with the spring case pointed down. This allows the actuator to be filled with fluid which maximizes speed of response and keeps air out of the system. Vents, if applicable, can be rotated after regulator installation so that the vent screens are pointed down.

Emerson Process Management Regulator Technologies, Inc. (Emerson) provides an instruction manual with every regulator shipped. Refer to this for complete installation, operation and maintenance instructions. Included is a complete list of individual parts and recommended spare parts.

## NACE Compliance

Optional materials are available for applications handling sour gases. These constructions comply with the recommendations of NACE International sour service standards.

The manufacturing processes and materials used by Emerson assure that all products specified for sour gas service comply with the chemical, physical and metallurgical requirements of NACE MR0175 ISO-2002, NACE MR0103 and/or ANSI/NACE MR0175/ISO 15156. Customers have

the responsibility to specify correct materials. Environmental limitations may apply and shall be determined by the user.

## Capacity Data

The capacity information on the following pages is based on three droop factors, 10%, 20% and 40%. Droop is deviation from the setpoint of the regulator and is usually stated in percentage of setpoint value.

For highest capacity and the most accurate control within a particular type of the MR95 Series regulators, use the lowest range spring that can be adjusted to the desired setpoint (see Table 3 for part numbers of appropriate springs for each body size).

If closer control is necessary, a regulator of larger capacity or different design should be selected, so that the necessary flow can be obtained with a smaller droop factor.

Sometimes it may be necessary to interpolate the capacity table data to determine capacity for outlet settings not given. To maintain accuracy, it is important when interpolating to stay within a spring range if possible. The following is a procedure for interpolating the data to calculate flow:

1. Determine which spring is to be used.
2. Find the two outlet settings ( $P_{2a}$  and  $P_{2b}$ ) that bracket the actual outlet pressure  $P_2$ .
3. For a given body size and inlet pressure, find the capacity  $Q_a$  for  $P_{2a}$  and  $Q_b$  for  $P_{2b}$ .
4. Use the following formula to determine the interpolated capacity ( $Q$ ):

$$\frac{Q_b - Q_a}{P_{2b} - P_{2a}} = \frac{Q_b - Q}{P_{2b} - P_2}$$

*Example:*

$P_1 = 100$  psig / 6.9 bar  
 1/4 NPT Type MR95H with 15 to 30 psig / 1.0 to 2.1 bar spring range

$P_2 = 20$  psig / 1.4 bar  
 Determine air capacity,  $Q$

*Solution:*

$Q_a = 1100$  SCFH / 28.8 Nm<sup>3</sup>/h  
 $P_{2a} = 15$  psig / 1.0 bar  
 $Q_b = 1700$  SCFH / 46.5 Nm<sup>3</sup>/h  
 $P_{2b} = 30$  psig / 2.1 bar

# MR95 Series

$$\frac{1700 - 1100}{30 - 15} = \frac{1700 - Q}{30 - 20}$$

Q = 1300 SCFH

$$\frac{46.5 - 28.8}{2.1 - 1.0} = \frac{46.5 - Q}{2.1 - 1.4}$$

Q = 35 Nm<sup>3</sup>/h

### Note

**The same interpolation procedure can be used for different inlet pressures.**

Contact your local Sales Office if you should have any questions about selecting the proper regulator.

## Air Capacities

Regulating capacities at selected pressures and outlet pressure flows are given in SCFH (60°F and 14.7 psia) of air. To determine the equivalent capacities for other gases, multiply the table capacities by the following appropriate conversion factors: 1.29 for 0.6 specific gravity natural gas, 0.808 for propane, 0.707 for butane or 1.018 for nitrogen. For gases of other specific gravities, divide by the square root of the appropriate specific gravity.

Then, if capacity is desired in Nm<sup>3</sup>/h at 0°C and 1.01325 bar, multiply SCFH by 0.0268.

Capacities in Tables 11, 12, 13, 14 and 15 are for regulators using elastomer diaphragms. Depending on regulator construction, a multiplier must be used to convert to capacities for regulators using metal diaphragms.

To determine wide-open flow capacity for relief valve sizing of air at a temperature of 60°F, use the equation for critical pressure drops (absolute outlet pressure equal to one-half or less than one-half the absolute inlet pressure).

$$Q = P_{1(\text{abs})} C_g$$

where,

Q = Gas flow, SCFH (60°F and 14.7 psia)

P<sub>1(abs)</sub> = Absolute inlet pressure, psia (add 14.7 psi to gauge inlet pressure to obtain absolute inlet pressure)

C<sub>g</sub> = Wide-open gas sizing coefficient from Table 6

For pressure drops lower than critical (absolute outlet pressure greater than one-half the absolute inlet pressure), use the sizing nomographs in Fisher™ Catalog 10 or the Fisher Sizing Program.

To obtain capacities in Nm<sup>3</sup>/h at 0°C and 1.01325 bar, multiply the capacity determined in SCFH by 0.0268.

## Steam Capacities

Capacities in Tables 16, 17, 18, 19 and 20 are in lbs/h of saturated steam. To obtain capacities in kg/h, multiply the capacities given in the table by 0.4535. Capacities have been calculated for stainless steel diaphragms only since steam service exceeds the elastomer diaphragm temperature limits.

To determine wide-open flow capacity for relief valve sizing of steam, use the equation for critical pressure drops (absolute outlet pressure equal to one-half or less than one-half absolute inlet pressure).

$$Q = P_{1(\text{abs})} C_s$$

where,

Q = Steam flow, lbs/h

P<sub>1(abs)</sub> = Absolute inlet pressure, psia (add 14.7 psi to gauge inlet pressure to obtain absolute inlet pressure)

C<sub>s</sub> = Wide-open steam sizing coefficient from Table 6

For pressure drops lower than critical (absolute outlet pressure greater than one-half absolute inlet pressure), use the sizing nomographs in the Fisher Sizing Program.

## Water Capacities

All water capacities in Tables 21, 22, 23, 24 and 25 are in gallons per minute (GPM). Capacities in Tables 21, 22 and 24 are for regulators using only elastomer diaphragms. Depending on regulator size, a multiplier, given in these tables, must be used to convert to capacities for regulators using metal diaphragms.

To determine flow capacity for liquid relief valve sizing, refer to the Fisher Sizing Program using the C<sub>v</sub> coefficients given in Table 6. The K<sub>m</sub> values listed in Table 6 can be used to predict choked flow on liquid service.

To convert capacities to m<sup>3</sup>/h, multiply GPM by 0.2271.

 Does the Application Require Overpressure Protection?  
 Yes  No If yes, which is preferred:  
 Relief Valve  Monitor Regulator  Shutoff Device  
 Is overpressure protection equipment selection assistance desired?

**Pressure:**  
 Maximum Inlet Pressure ( $P_{1max}$ ) \_\_\_\_\_  
 Minimum Inlet Pressure ( $P_{1min}$ ) \_\_\_\_\_  
 Downstream Pressure Setting(s) ( $P_2$ ) \_\_\_\_\_  
 Maximum Flow ( $Q_{max}$ ) \_\_\_\_\_

**Performance Required:**  
 Accuracy Requirements? \_\_\_\_\_  
 Need for Extremely Fast Response? \_\_\_\_\_

**Other Requirements:** \_\_\_\_\_

# MR95 Series
