

# Technical Information

## Proline Promag 10L

### Electromagnetic flowmeter

The flowmeter with a weight-optimized sensor and highly cost-effectiveness

#### Application

- The measuring principle is virtually independent of pressure, density, temperature and viscosity
- Fully suitable for standard applications in the water and wastewater industry

#### Device properties

- Up to 30 % less sensor weight
- Nominal diameter: DN 25 to 2400 (1 to 90")
- Maximum reduced installation length to DVGW/ISO
- 2-line display with push buttons
- Device in compact or remote version
- HART

#### Your benefits

- Reduced installation costs – flexible mounting by one-of-a-kind lap-joint flange concept (DN < 350/14")
- Energy-saving flow measurement – no pressure loss due to cross-section constriction
- Maintenance-free – no moving parts
- Cost-effective – designed for easy applications and direct integration
- Safe operation – display provides easy readable process information
- Fully industry compliant – IEC/EN/NAMUR

## Function and system design

### Measuring principle

Following *Faraday's law of magnetic induction*, a voltage is induced in a conductor moving through a magnetic field.

$U_e$	Induced voltage
$B$	Magnetic induction (magnetic field)
$L$	Electrode spacing
$I$	Current
$v$	Flow velocity

In the electromagnetic measuring principle, the flowing medium is the moving conductor. The voltage induced ( $U_e$ ) is proportional to the flow velocity ( $v$ ) and is supplied to the amplifier by means of two measuring electrodes. The flow volume ( $Q$ ) is calculated via the pipe cross-section ( $A$ ). The DC magnetic field is created through a switched direct current of alternating polarity.

#### Formulae for calculation:

- Induced voltage  $U_e = B \cdot L \cdot v$
- Volume flow  $Q = A \cdot v$

### Measuring system

The measuring system consists of a transmitter and a sensor.

Two versions are available:

- Compact version: Transmitter and sensor form a mechanical unit.
- Remote version: Sensor is mounted separate from the transmitter.

Transmitter:

- Promag 10 (key operation, two-line, unilluminated display)

Sensor:

- Promag L
  - DN 25 to 300 (1 to 12")
  - DN 350 to 2400 (14 to 90")

Note!

To avoid corrosion, the sensor and process connection material must be selected considering the environmental and process conditions.

## Input

**Measured variable** Flow velocity (proportional to induced voltage)

**Measuring range** Measuring ranges for liquids  
Typically  $v = 0.01$  to  $10$  m/s ( $0.03$  to  $33$  ft/s) with the specified accuracy

Flow characteristic values (SI units)

Diameter		Recommended flow		Factory settings

Electrical connection

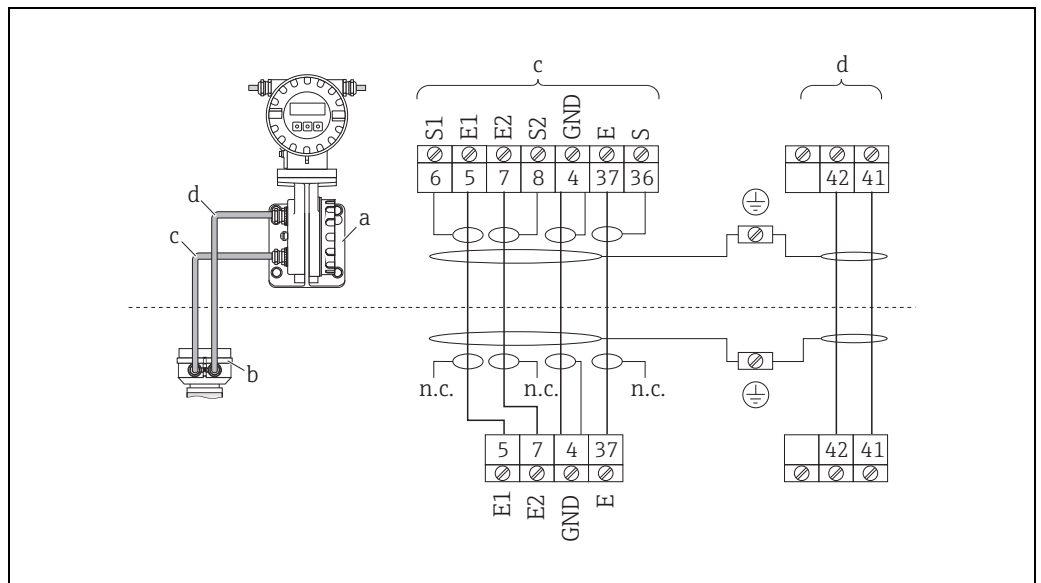

A0003192

Connecting the transmitter (aluminum field housing), cable cross-section max. 2.5 mm<sup>2</sup> (14 AWG)

- a Electronics compartment cover
- b Power supply cable
- c Ground terminal for power supply cable
- d Terminal connector for power supply cable
- e Electrode cable
- f Ground terminal for electrode cable
- g Terminal connector for electrode cable
- h Service connector
- i Ground terminal for potential equalization

Electrical connection, remote version

A0012461

Connecting the remote version

- a Wall-mount housing connection compartment
- b Sensor connection housing cover
- c Electrode cable
- d Coil current cable
- n.c. Not connected, insulated cable shields

Terminal numbers and cable colors:  
5/6 = brown, 7/8 = white, 4 = green, 37/36 = yellow

Potential equalization

Note!

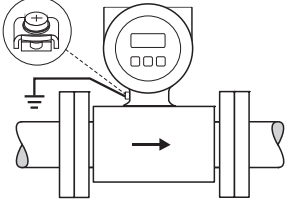

The measuring system must be included in the potential equalization.

Perfect measurement is only ensured when the fluid and the sensor have the same electrical potential. This is ensured by the reference electrode integrated in the sensor as standard.

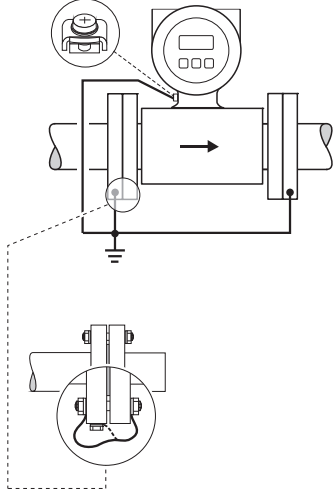

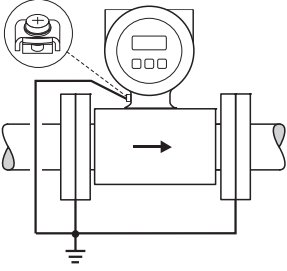

The following should also be taken into consideration for potential equalization:

- Internal grounding concepts in the company
- Operating conditions, such as the material/ grounding of the pipes (see table)

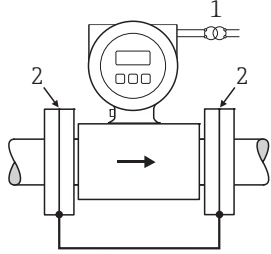

#### Standard situation

Operating conditions	Potential equalization
<p>When using the measuring device in a:</p> <ul style="list-style-type: none"> <li>■ Metal, grounded pipe</li> </ul> <p>Potential equalization takes place via the ground terminal of the transmitter.</p> <p> <b>Note!</b> When installing in metal pipes, we recommend you connect the ground terminal of the transmitter housing with the piping.</p>	 <p style="text-align: right;">A0010831</p> <p><i>Via the ground terminal of the transmitter</i></p>

#### Special situations

Operating conditions	Potential equalization
<p>When using the measuring device in a:</p> <ul style="list-style-type: none"> <li>■ Metal pipe that is not grounded</li> </ul> <p>This connection method also applies in situations where:</p> <ul style="list-style-type: none"> <li>■ Customary potential equalization cannot be ensured.</li> <li>■ Excessively high equalizing currents can be expected.</li> </ul> <p>Both sensor flanges are connected to the pipe flange by means of a ground cable (copper wire, at least 6 mm<sup>2</sup> / 0.0093 in<sup>2</sup>) and grounded. Connect the transmitter or sensor connection housing, as applicable, to ground potential by means of the ground terminal provided for the purpose.</p> <p>The ground cable is mounted directly on the conductive flange coating with the flange screws.</p> <p> <b>Note!</b> The ground cable for flange-to-flange connections can be ordered separately as an accessory from Endress+Hauser.</p>	 <p style="text-align: right;">A0011567</p> <p><i>Via the ground terminal of the transmitter and the flanges of the pipe</i></p>
<p>When using the measuring device in a:</p> <ul style="list-style-type: none"> <li>■ Plastic pipe</li> <li>■ Pipe with insulating lining</li> </ul> <p>This connection method also applies in situations where:</p> <ul style="list-style-type: none"> <li>■ Customary potential equalization cannot be ensured.</li> <li>■ Excessively high equalizing currents can be expected.</li> </ul> <p>Potential equalization takes place using additional ground disks, which are connected to the ground terminal via a ground cable (copper wire, at least 6 mm<sup>2</sup> / 0.0093 in<sup>2</sup>). When installing the ground disks, please comply with the enclosed Installation Instructions.</p>	 <p style="text-align: right;">A0010833</p> <p><i>Via the ground terminal of the transmitter and the optionally available ground disks</i></p>

Operating conditions	Potential equalization
<p>When using the measuring device in a:</p> <ul style="list-style-type: none"> <li>▪ Pipe with a cathodic protection unit</li> </ul> <p>The device is installed potential-free in the pipe. Only the two flanges of the pipe are connected with a ground cable (copper wire, at least 6 mm<sup>2</sup> / 0.0093 in<sup>2</sup>). Here, the ground cable is mounted directly on the conductive flange coating with flange screws.</p> <p>Note the following when installing:</p> <ul style="list-style-type: none"> <li>▪ The applicable regulations regarding potential-free installation must be observed.</li> <li>▪ There should be <b>no</b> electrically conductive connection between the pipe and the device.</li> <li>▪ The mounting material must withstand the applicable torques.</li> </ul>	 <p style="text-align: right;">A0010834</p> <p>Potential equalization and cathodic protection</p> <p>1 Power supply isolation transformer 2 Electrically isolated</p>

**Cable entry**

**Power supply and electrode cables (inputs/ outputs):**

- Cable entry M20 × 1.5 (8 to 12 mm / 0.31 to 0.47")
- Thread for cable entries, ½" NPT, G ½"

**Connecting cable for remote version:**

- Cable entry M20 × 1.5 (8 to 12 mm / 0.31 to 0.47")
- Thread for cable entries, ½" NPT, G ½"

**Cable specification**

**Coil current cable**

- 3 × 0.75 mm<sup>2</sup> (18 AWG) PVC cable with common, braided copper shield (∅ ~ 9 mm / 0.35")
- Conductor resistance: ≤ 37 Ω/km (≤ 0.011 Ω/ft)
- Capacitance core/core, shield grounded: ≤ 120 pF/m (≤ 37 pF/ft)
- Operating temperature: -20 to +80 °C (-68 to +176 °F)
- Cable cross-section: max. 2.5 mm<sup>2</sup> (14 AWG)
- Test voltage for cable insulation: ≤ 1433 AC r.m.s. 50/60 Hz or ≥ 2026 V DC

**Electrode cable**

- 3 × 0.38 mm<sup>2</sup> (20 AWG) PVC cable with common, braided copper shield (∅ ~ 9.5 mm / 0.37") and individual shielded cores
- With empty pipe detection (EPD): 4 × 0.38 mm<sup>2</sup> (20 AWG) PVC cable with common, braided copper shield (∅ ~ 9.5 mm / 0.37") and individual shielded cores
- Conductor resistance: ≤ 50 Ω/km (≤ 0.015 Ω/ft)
- Capacitance core/shield: ≤ 420 pF/m (≤ 128 pF/ft)
- Operating temperature: -20 to +80 °C (-68 to +176 °F)
- Cable cross-section: max. 2.5 mm<sup>2</sup> (14 AWG)

- a Electrode cable  
b Coil current cable
- 1 Core  
2 Core insulation  
3 Core shield  
4 Core jacket  
5 Core reinforcement  
6 Cable shield  
7 Outer jacket

Operation in zones of severe electrical interference

The measuring device complies with the general safety requirements in accordance with EN 61010 and the EMC requirements of IEC/EN 61326.

Note!

Grounding is by means of the ground terminals provided for the purpose inside the connection housing. Ensure that the stripped and twisted lengths of cable shield to the ground terminal are as short as possible.

## Performance characteristics

### Reference operating conditions

- Error limits following DIN EN 29104, future ISO 20456
- Water, typically +15 to +45°C (+59 to +113 °F); 0.5 to 7 bar (73 to 101 psi)
- Specification as per calibration protocol
- Data on the measured error based on accredited calibration rigs traced back to ISO 17025

### Maximum measured error

- Current output: also typically  $\pm 5 \mu\text{A}$
- Pulse output:  $\pm 0.5\%$  o.r.  $\pm 2 \text{ mm/s}$  ( $\pm 0.5\%$  o.r.  $\pm 0.08 \text{ in/s}$ ) (o.r. = of reading)

Fluctuations in the supply voltage do not have any effect within the specified range.

A0003200

Max. measured error in % of reading

### Repeatability

Max.  $\pm 0.2\%$  o.r.  $\pm 2 \text{ mm/s}$  ( $\pm 0.2\%$  o.r.  $\pm 0.08 \text{ in/s}$ ) (o.r. = of reading)

## Installation

### Mounting location

Entrained air or gas bubble formation in the measuring tube can result in an increase in measuring errors.

**Avoid** the following installation locations in the pipe:

- Highest point of a pipeline. Risk of air accumulating!
- Directly upstream from a free pipe outlet in a vertical pipeline.

A0003202

Mounting location

### Installation of pumps

Sensors may not be installed on the pump suction side. This precaution is to avoid low pressure and the consequent risk of damage to the lining of the measuring tube. Information on the pressure tightness of the measuring tube lining → 17, Section "Pressure tightness".

Pulsation dampers may be needed when using piston pumps, piston diaphragm pumps or hose pumps. Information on the shock and vibration resistance of the measuring system → 16, Section "Shock and vibration resistance".

A0003203

Installation of pumps

### Partially filled pipes

Partially filled pipes with gradients necessitate a drain-type configuration.

The empty pipe detection function (EPD) provides additional security in detecting empty or partially filled pipes.

Note!

Risk of solids accumulating. Do not install the sensor at the lowest point in the drain. It is advisable to install a cleaning valve.

A0003204

Installation with partially filled pipes

### Down pipes

Install a siphon or a vent valve downstream of the sensor in down pipes  $h \geq 5$  m (16.4 ft). This precaution is to avoid low pressure and the consequent risk of damage to the lining of the measuring tube. This measure also prevents the liquid current stopping in the pipe which could cause air locks. Information on the pressure tightness of the measuring tube lining → 17, Section "Pressure tightness".

A0008157

Installation measures for vertical pipes

- 1 Vent valve
- 2 Pipe siphon
- h Length of the down pipe

### Orientation

An optimum orientation helps avoid gas and air accumulations and deposits in the measuring tube. However, the measuring device also offers the additional function of empty pipe detection (EPD) for detecting partially filled measuring tubes or if outgassing fluids or fluctuating operating pressures are present.

#### Vertical orientation

This is the ideal orientation for self-emptying piping systems and for use in conjunction with empty pipe detection.

A0008158

Vertical orientation

*Horizontal orientation*

The measuring electrode axis should be horizontal. This prevents brief insulation of the two measuring electrodes by entrained air bubbles.

**Note!**

Empty pipe detection only works correctly with horizontal orientation if the transmitter housing is facing upwards. Otherwise there is no guarantee that empty pipe detection will respond if the measuring tube is only partially filled or empty.

A0003207

*Horizontal orientation*

- 1 EPD electrode for empty pipe detection
- 2 Measuring electrodes for signal detection
- 3 Reference electrode for potential equalization

**Inlet and outlet run**

If possible, install the sensor well clear of assemblies such as valves, T-pieces, elbows etc.

Note the following inlet and outlet runs to comply with measuring accuracy specifications:

- Inlet run:  $\geq 5 \times \text{DN}$
- Outlet run:  $\geq 2 \times \text{DN}$

A0003210

*Inlet and outlet run*

## Adapters

Suitable adapters to DIN EN 545 (double-flange reducers) can be used to install the sensor in larger-diameter pipes. The resultant increase in the rate of flow improves measuring accuracy with very slow-moving fluids. The nomogram shown here can be used to calculate the pressure loss caused by reducers and expanders.

Note!

The nomogram only applies to liquids of viscosity similar to water.

1. Calculate the ratio of the diameters  $d/D$ .
2. From the nomogram read off the pressure loss as a function of flow velocity (downstream from the reduction) and the  $d/D$  ratio.

Pressure loss due to adapters

A0003213

**Length of connecting cable**

When mounting the remote version, please note the following to achieve correct measuring results:

- Fix cable run or lay in armored conduit. Cable movements can falsify the measuring signal especially in the case of low fluid conductivities.
- Route the cable well clear of electrical machines and switching elements.
- If necessary, ensure potential equalization between sensor and transmitter.
- The permitted cable length  $L_{max}$  is determined by the fluid conductivity.  
A minimum conductivity of  $50 \mu\text{S/cm}$  is needed for all fluids.
- When the empty pipe detection function is switched on (EPD), the maximum connecting cable length is 10 m (33 ft).

Permitted length of connecting cable for remote version  
Area marked in gray = permitted range;  $L_{max}$  = length of connecting cable in [m] ([ft]); fluid conductivity in [ $\mu\text{S/cm}$ ]

**Special mounting instructions**

**Temporary use in water**

A remote version in IP67, type 6 is optionally available for temporary use in water up to 168 hours at  $\leq 3 \text{ m}$  (10 ft) or, in exceptional cases, for use up to 48 hours at  $\leq 10 \text{ m}$  (30 ft). Compared to the degree of protection of standard version IP67, type 4X enclosure, the version IP67, type 6 enclosure was designed to withstand short-term or temporary submergence (e.g. flooding).

Engineering unit m (ft)

## Environment

### Ambient temperature range

#### Transmitter

- -20 to +60 °C (-4 to +140 °F)

#### Sensor

- Flange material carbon steel: -10 to +60 °C (14 to +140 °F)
- Flange material stainless steel (DN ≤ 300/12"): -40 to +60 °C (-40 to +140 °F)

#### Note!

The permitted temperature range of the measuring tube lining may not be undershot or overshoot (-> 17, Section "Medium temperature range").

Please note the following points:

- Install the device in a shady location. Avoid direct sunlight, particularly in warm climatic regions.
- The transmitter must be mounted separate from the sensor if both the ambient and fluid temperatures are high.

### Storage temperature

The storage temperature corresponds to the operating temperature range of the measuring transmitter and the appropriate measuring sensors.

#### Note!

- The measuring device must be protected against direct sunlight during storage in order to avoid unacceptably high surface temperatures.
- A storage location must be selected where moisture does not collect in the measuring device. This will help prevent fungus and bacteria infestation which can damage the liner.

### Degree of protection

#### Transmitter

- As standard: IP67, type 4X enclosure
- When housing is open: IP20; type 1 enclosure

#### Sensor

- As standard: IP67, type 4X enclosure
- Optionally available for remote version:
  - IP67, Type 6P enclosure. Suitable for temporary use in water up to 168 hours at ≤ 3 m (10 ft) or up to 48 hours at ≤ 10 m (30 ft).
  - IP68, Type 6P enclosure (for DN ≤ 300 (12") only possible in conjunction with stainless steel flanges)  
Not suitable for use in corrosive atmospheres/liquids or in buried applications if special precautions are not taken.

### Shock and vibration resistance

Acceleration up to 2 g following IEC 600 68-2-6

### Electromagnetic compatibility (EMC)

- As per IEC/EN 61326 as well as NAMUR Recommendation NE 21
- Emission: to limit value for industry EN 55011

## Process

### Medium temperature range

- 0 to +80 °C (+32 to +176 °F) for hard rubber (DN 350 to 2400 / 14 to 90")
- -20 to +50 °C (-4 to +122 °F) for polyurethane (DN 25 to 1200 / 1 to 48")
- -20 to +90 °C (-4 to +194 °F) for PTFE (DN 25 to 300 / 1 to 12")

### Conductivity

The minimum conductivity is:  $\geq 50 \mu\text{S}/\text{cm}$

Note!

In the remote version, the necessary minimum conductivity also depends on the cable length ( $\rightarrow$  15, Section "Length of connecting cable").

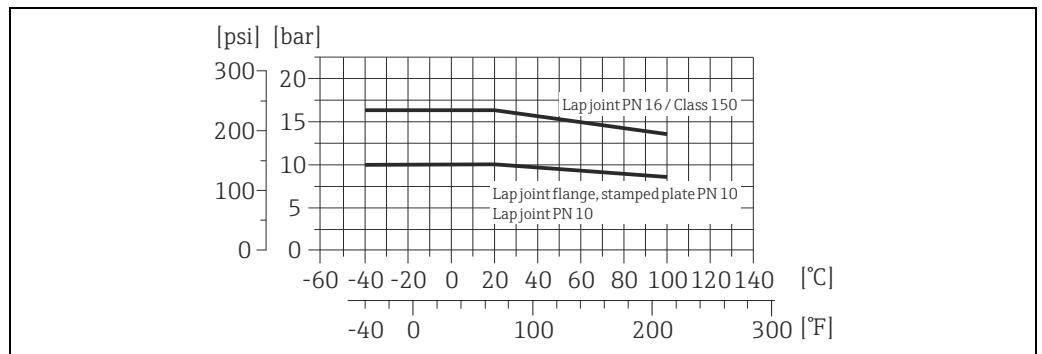

### Pressure-temperature ratings

Note!

- The following diagrams contain allowable operating pressures as a function of the medium temperature. However, the maximum medium temperatures permitted always depend on the lining material of the sensor and/or the sealing material ( $\rightarrow$  17).
- Permitted test pressure =  $1.5 \times$  nominal pressure

**Process connection: lap joint flange/lap joint flange, stamped plate according to EN 1092-1 (DIN 2501) and ASME B16.5; DN 25 to 300 (1 to 12")**

A0021399-EN

Process connection material: stainless steel (min. -40 °C (-40 °F)), carbon steel (min. -10 °C (+14 °F))

**Process connection: flange according to EN 1092-1 (DIN 2501); DN 350 to 2400 (14 to 90")**

A0025178-EN

Process connection material: carbon steel

300	12"	400	5.80	500	7.25

**Limiting flow**

The diameter of the pipe and the flow rate determine the nominal diameter of the sensor. The optimum flow velocity is between 2 to 3 m/s (6.5 to 9.8 ft/s). The velocity of flow (v), moreover, has to be matched to the physical properties of the fluid:

- $v < 2 \text{ m/s}$  (6.5 ft/s): for abrasive fluids such as potter's clay, lime milk, ore slurry etc.
- $v > 2 \text{ m/s}$  (6.5 ft/s): for fluids causing build-up such as wastewater sludges etc.

For an overview of the measuring range full scale values, see the "Measuring range" section → 4.

**Pressure loss**

- No pressure loss if the sensor is installed in a pipe with the same nominal diameter.
- Pressure losses for configurations incorporating adapters according to DIN EN 545 (→ 14, Section "Adapters").

**Vibrations**

Secure the piping and the sensor if vibration is severe.

Note!

If vibrations are too severe, we recommend the sensor and transmitter be mounted separately. Information on the permitted shock and vibration resistance → 16, Section "Shock and vibration resistance".

Measures to prevent vibration of the measuring device

$L > 10 \text{ m}$  (33 ft)

\* Designed acc. to EN 1092-1 (not to DIN 2501)

**Material**

- Transmitter housing:
  - Compact housing: powder-coated die-cast aluminum
  - Wall-mounted housing: powder-coated die-cast aluminum
- Sensor housing
  - DN 25 to 300 (1 to 12"): powder-coated die-cast aluminum
  - DN 350 to 1200 (14 to 48"): with protective lacquering
- Measuring tube:
  - DN 25 to 300 (1 to 12"): Stainless-steel, 1.4301/1.4306 (304L)
  - DN 350 to 1200 (14 to 48"): Stainless-steel, 1.4301/1.4307 (304)
  - DN 1350 to 2400 (54 to 90"): Stainless-steel, 1.4301/1.4307
- Electrodes: 1.4435 (316L); Alloy C22, 2.4602 (UNS N06022)
- Flanges (All lap joint flanges made from carbon steel are hot-dip galvanized):
  - EN 1092-1 (DIN 2501)
    - DN 25 to 300
      - Lap joint flange:
        - Stainless-steel, 1.4306/1.4307
        - Carbon steel, 235JR
      - Lap joint flange, stampel plate:
        - Stainless-steel, 1.4301 (304)
        - Carbon steel, RSt37-2
    - DN 350 to 2400: carbon steel, S235JRG2, S235JR+N, P250GH, P245GH, E250C, A105
    - DN 350 to 600: Stainless-steel, 1.4571
    - DN 700 to 1000: Stainless-steel, 1.4404
  - ASME B16.5
    - DN ≤ 300 (12"), lap joint flange:
      - Stainless-steel, F316L
      - Carbon steel, A105
    - DN ≥ 350 (14"):
      - Carbon steel, A105
      - Stainless-steel, F316L
  - AWWA C207: A105, A181 Cl.70, E250C, S235JRG2, P265GH, S275JR
  - AS 2129: Carbon steel, A105, P235GH, P265GH, S235JRG2, E250C
  - AS 4087: Carbon steel, A105, P265GH, S275JR, E250C
- Seals: to DIN EN 1514-1 IBC form
- Ground disks: 1.4435 (316L) or Alloy C22, 2.4602 (UNS N06022)

**Fitted electrodes**

Measuring electrodes, reference electrodes and empty pipe detection electrodes available as standard with:

- 1.4435 (316L)
- Alloy C22, 2.4602 (UNS N06022)

**Process connections**

- EN 1092-1 (DIN 2501)
  - (Dimensions to DIN 2501, DN 65 PN 16 exclusively to EN 1092-1)
  - DN ≤ 300: lap joint flange (PN 10/16), lap joint flange, stamped plate (PN 10) = form A
  - DN ≥ 350: fixed flange (PN 6/10)= flat race
- ASME B16.5
  - DN ≤ 300 (12"): lap joint flange(Class 150)
  - DN ≥ 350 (14"): fixed flange (Class 150)
- AWWA C207
  - DN 48 to 90": fixed flange (Class D)
- AS 2129
  - DN 350 to 1200: fixed flange (Table E)
- AS 4087
  - DN 350 to 1200: fixed flange (PN16)

For information on the materials of the process connections →  37 Material

**Surface roughness**

Electrodes with 1.4435 (316L), Alloy C22, 2.4602 (UNS N06022): ≤ 0.3 to 0.5 μm (11.8 to 19.7 μin)  
(all data refer to parts in contact with medium)

## Operability

### Local operation

#### Display elements

- Liquid crystal display: unilluminated, two lines with 16 characters per line
- Display (operating mode) preconfigured: volume flow and totalizer status
- 1 totalizers

#### Operating elements

- Onsite operation via three keys (◻, ⊕, ⊖)

### Remote operation

Operation via HART protocol and FieldCare

## Certificates and approvals

### CE mark

The measuring system is in conformity with the statutory requirements of the EC Directives. Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

### C-tick mark

The measuring system meets the EMC requirements of the "Australian Communication and Media Authority (ACMA)".

### Drinking water approval

- WRAS BS 6920
- ACS
- NSF 61
- KTW/W270

### Other standards and guidelines

- EN 60529  
Degrees of protection by housing (IP code).
- EN 61010  
Protection Measures for Electrical Equipment for Measurement, Control, Regulation and Laboratory Procedures.
- IEC/EN 61326  
"Emission in accordance with requirements for Class A".  
Electromagnetic compatibility (EMC requirements).
- ANSI/ISA-S82.01  
Safety Standard for Electrical and Electronic Test, Measuring, Controlling and related Equipment - General Requirements. Pollution degree 2, Installation Category II.
- CAN/CSA-C22.2 No. 1010.1-92  
Safety requirements for Electrical Equipment for Measurement and Control and Laboratory Use. Pollution degree 2, Installation Category II

## Ordering information

Detailed ordering information is available from the following sources:

- In the Product Configurator on the Endress+Hauser website: [www.endress.com](http://www.endress.com) → Select country → Instruments → Select device → Product page function: Configure this product
- From your Endress+Hauser Sales Center: [www.endress.com/worldwide](http://www.endress.com/worldwide)

Note!

### Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

## Accessories

Various accessories, which can be ordered separately from Endress+Hauser, are available for the transmitter and the sensor. Your Endress+Hauser service organization can provide detailed information on the order codes in question.

### Device-specific accessories

#### For the transmitter

Accessory	Description
Promag 10 transmitter	Transmitter for replacement or for stock. Use the order code to define the following specifications: <ul style="list-style-type: none"> <li>▪ Approvals</li> <li>▪ Degree of protection / version</li> <li>▪ Cable type for the remote version</li> <li>▪ Cable entries</li> <li>▪ Display / power supply / operation</li> <li>▪ Software</li> <li>▪ Outputs / inputs</li> </ul>
Mounting set	Mounting set for the aluminum field housing (remote version). Suitable for pipe mounting.
Cable for remote version	Coil current and electrode cables, various lengths.

#### For the sensor

Accessory	Description
Ground cable	Ground cable for potential equalization.
Ground disk	Ground disk for potential equalization.

**Communication-specific accessories**

Accessory	Description
HART handheld terminal Field Xpert SFX 100	Handheld terminal for remote configuration and for obtaining measured values via the HART current output (4 to 20 mA). Contact your Endress+Hauser representative for more information.
Fieldgate FXA320	Gateway for remote interrogation of HART sensors and actuators via web browser: <ul style="list-style-type: none"> <li>▪ 2-channel analog input (4 to 20 mA)</li> <li>▪ 4 binary inputs with event counter function and frequency measurement</li> <li>▪ Communication via modem, Ethernet or GSM</li> <li>▪ Visualization via Internet/Intranet in the web browser and/or WAP cellular phone</li> <li>▪ Limit value monitoring with alarm signaling by e-mail or SMS</li> <li>▪ Synchronized time stamping of all measured values.</li> </ul>
Fieldgate FXA520	Gateway for remote interrogation of HART sensors and actuators via web browser: <ul style="list-style-type: none"> <li>▪ Web server for remote monitoring of up to 30 measuring points</li> <li>▪ Intrinsically safe version [Ex ia] IIC for applications in hazardous areas</li> <li>▪ Communication via modem, Ethernet or GSM</li> <li>▪ Visualization via Internet/Intranet in the web browser and/or WAP cellular phone</li> <li>▪ Limit value monitoring with alarm signaling by e-mail or SMS</li> <li>▪ Synchronized time stamping of all measured values</li> <li>▪ Remote diagnostics and remote configuration of connected HART devices</li> </ul>
FXA195	The Commubox FXA195 connects intrinsically safe smart transmitters using the HART protocol to the USB port of a personal computer. This enables remote operation of the transmitter with operating software (e.g. FieldCare). Power is supplied to the Commubox via the USB port.

**Service-specific accessories**

Accessory	Description
Applicator	Software for selecting and configuring flowmeters. Applicator can be downloaded from the Internet or ordered on CD-ROM for installation on a local PC. Contact your Endress+Hauser representative for more information.
Fieldcheck	Tester/simulator for testing flowmeters in the field. When used in conjunction with the "FieldCare" software package, test results can be imported into a database, printed and used for official certification. Contact your Endress+Hauser representative for more information.
FieldCare	FieldCare is Endress+Hauser's FDT-based plant asset management tool. It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.
FXA193	The FXA193 service interface connects the device to the PC for operation via FieldCare.
Memograph M graphic display recorder	The Memograph M graphic display recorder provides information on all the relevant process variables: Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on a SD card or USB stick. The ReadWin® 2000 PC software is part of the standard package and is used for configuring, visualizing and archiving the data captured.

**Documentation**

- Flow measurement (FA00005D/06)
- Operating Instructions Promag 10 (BA00082D/06)
