Static pressure (EΔPs)

per 0.5 MPa, 5 bar or 72.5 psi (sensor A)

per 2 MPa, 20 bar or 290 psi (sensor B)

±0.08 % of URL for sensor A, B and E
- span error: ±0.08 % of reading.

Model 266DSH high static

±0.08 % of URL for sensor E

span error: ±0.08 % of reading.

Supply voltage

Within voltage/load specified limits the total effect is less than 0.005 % of URL per volt.

Load

Within load/voltage specified limits the total effect is negligible.

Electromagnetic field

Meets all the requirements of EN 61326 for surge immunity level (of NAMUR NE 21 on request).

Common mode interference

No effect from 100Vrms @ 50Hz, or 50 V DC

Mounting position

Rotations in the plane of the diaphragm have a negligible effect. A tilt from the vertical of up to 90° causes a zero point shift of up to 0.5 kPa (5 mbar, 2 inH2O), which can be corrected by making an appropriate zero position adjustment. There is no effect on the measuring span. In applications where a dynamic inclined installation is required (e.g. naval applications with maximum vessel inclination of +/-22.5°), the maximum error can be up to 3 mbar for 266DSH

Such error might be resulting in a deviation from the standard accuracy with percentual magnitude depending on the range of the selected device.

In case of non-dynamic inclined installations, this effect can be eliminated by performing a zero calibration in the field.

Please contact ABB to assess more in details on the installation effects

NACE COMPLIANCE INFORMATION

- 1 The materials of constructions comply with metallurgical recommendations of NACE MR0175/ISO 15156 for sour oil field production environments. As specific environmental limits may apply to certain materials, please consult latest standard for further details. AISI 316/316 L, Hastelloy C-276 also conform to NACE MR0103 for sour refining environments.
- 2 NACE MR-01-75 addresses bolting requirements in two classes:
 - Exposed bolts: bolts directly exposed to the sour environment or buried, incapsulated or anyway not exposed to atmosphere
 - Non exposed bolts: the bolting must not be directly exposed to sour environments and must be directly exposed to the atmosphere at all times.

266DSH bolting identified by "NACE (non exposed)" are in compliance with requirements of NACE MR0103 when considered "non exposed bolting".

266DSH bolting identified by "NACE" are in compliance with requirements of NACE MR0175 when considered "exposed bolting".
